GUNNEBO

LIFTING

Gunnebo Industries - Our Past and Present

In 1764 counsellor Hans Hultman founded Gunnebo Industries in the shape of a hammer-smithy in Småland, Sweden. What he didn't know was that his company was going to grow and develop into an international corporation, well known in a great number of industries all over the world.

Gunnebo Industries stands on a 245 year old foundation and this provides us with great knowledge and experience. Our ability to adapt to our customers needs and demands, together with our focus on quality and safety, has made us stand strong where other companies have faltered. Today we have branched out in five business areas - Blocks, Fastening, Lifting, Telescopic and Traction – located in countries all over the world.

Gunnebo Lifting – Our Identity and Business Concept

Our business concept is:

“To develop, manufacture and market products in lifting and handling industry.”

We have from the very beginning continuously innovated and launched products that have lasted and became the market standard. For an example, we proudly presented products such as: the G-coupler connecting link, BK self locking hook range and the SKLI-Swivel.

Gunnebo Lifting is always trying to look ahead and create the products that will meet the demands of the future. This way of thinking has lead to the invention and production of the GrabiQ lifting system. GrabiQ combines the best of functionality, flexibility and product quality, which offers the end-user a unique multifunctional lifting system. Another great invention from Gunnebo Lifting is the UKN weld on hook.

Gunnebo Lifting - Lifting with a Purpose

We offer products that will increase the flexibility and efficiency; maximize the value of your lifting gear and lower your total cost. We offer a programme that will create a great customer value and customer satisfaction. We offer lifting with a purpose.

Innovation with a Purpose

We have through the years developed products to meet the strict demands from all industries, especially the offshore oil and gas industry. In these industries the working conditions are tough and our products must be reliable in extreme conditions. The BKD safety hook has an extra latch that secures the operation even if an unexpected opening of the hook should occur. This is innovation with a purpose.

Quality with a Purpose

Our lifting systems are valued for their long durability and great quality. Whether the working climate is hot or cold, our system makes the lifting operation work with high safety and functionality. Our quality system gives us the tools to work with continued improvements and we will always push our efforts into the mission of creating the best products available in the market. This is quality with a purpose.

Safety with a Purpose

Every day millions of tonnes of cargo, equipment and tools are distributed, loaded and unloaded around the world. Every hour, week and year lifting operations are taking place somewhere. Unfortunately not always with safety in mind. We have developed concepts for the lifting and handling industries. Our high quality GrabiQ-, LiftiQ-, Classic-, Johnson Blocks- and shackle programme have provided the user with an assurance that the load will be safe even in the toughest conditions. Our standards and moral obligation will be the same the world over, not just in the developed countries, nothing will move Gunnebo from this stance. More importantly, people and equipment will not be at risk of injury or damage. That is safety with a purpose.

Concept with a Purpose

As a result of 245 years experience Gunnebo Lifting has become known for quality, superior design and innovative product development, down to the smallest component. Our aim has always been to offer products that will increase flexibility and efficiency, maximized value and minimize costs. This has resulted in a number of state of the art solutions, for an example the GrabiQ and FlexiLeg systems, and in interaction with our clients and business partners we have been able to adjust our programs for higher satisfaction and increased customer value. This is concept with a purpose

About Our Products

Gunnebo Lifting - GrabiQ

Gunnebo Lifting has been responsible for many of the technological advances in lifting products throughout its history. We have an on-going commitment to constantly investigate new ideas that will make safer, quicker, easier and more cost effective lifting solutions possible. Our GrabiQ Grade 100 range features integral shortening, reduced number of components and more flexible use of chain slings. This provides a modular concept that covers a wide set of applications.

Chain and Lifting Components

Our chain and components are made from special quenched and tempered alloy steel. This guarantees very high strength, low weight, high wear resistance and long life. All lifting components are uniformly marked with equivalent chain size, grade, manufacture's designation and name for positive identification and each individual component and chain link is tested to the Manufacturing proof force (MPF) before delivery.

Shackles and Rigging Screws

Gunnebo Lifting has its own factory for the production of shackles and rigging screws. The factory is located outside Bergen in Norway and is Scandinavia's leading producer of these products. Gunnebo-Anja Industries AS is also quality assured according to ISO 9002 and parts of their shackle range is Type Approved to DNV 2.7-1.

Polyester Lifting & Lashing

Gunnebo Lifting offers complete lifting and lashing solutions in the soft product assortment. We have the patented RH-hook, a one piece solution that connects straight on to the roundsling, giving the user the most efficient solution with maximum flexibility and operational efficiency. Gunnebo Lifting has an extensive quality control of soft products that guarantees that they are following current standards and regulations.

LiftiQ Chain Blocks & Lever Hoists

The LiftiQ Chain Blocks & Lever Hoists range is designed in cooperation with high demanding offshore clients in the North Sea. The range is designed for heavy duty lifting and materials handling operations and manufactured to fulfil International standards.

Gunnebo Johnson Blocks & Sockets

Gunnebo Johnson – a name recognized by industries worldwide as a mark of uncompromising excellence. An extensive product line, including e.g. snatch blocks, crane blocks, overhaul balls and sockets. Rigid controls on high quality make Gunnebo Johnson products the standard of choice. All products are manufactured in our own factory in Tulsa, Oklahoma, USA.

Certificates

Gunnebo Industrier AB, Lifting business area have environmental and quality management approved to ISO 14001:1996 and ISO 9001:2000. Approval applies to all units in Sweden. The systems are certified by Lloyd's Register.

1

Service

Inspection and Service for Your Security

According to current standards and the regulations of the labour inspection, lifting gear must be inspected and documented at least once a year, depending on the activity. The labour management at the company is responsible for regulations being followed.

Through inspection and documentation, the company achieves a safer working environment and better order, resulting in a better economy. This is in line with work done on the quality improvement of your business.

Survey records can be shown to customers, certification bodies, labour inspection and others. With a service contract you will make your business safer by having regular inspections of your lifting gear.

The company can concentrate on their core business while we will carry out maintenance and repairs on site whenever it is possible. This will ensure that you will not be without your lifting gear for any extended periods of time.

The company makes positive savings and maintains a high productivity. Gunnebo Lifting has the best equipped service truck for inspection of lifting gear on today's market. We carry out inspection of lifting gear including:

-
- | | |
|----------------------------------|---------------------------------|
| • Steel wire and sling | • Roundslings |
| • Chain and sling | • Webbing |
| • Lever hoists | • Webbing slings |
| • Hand chain blocks and trolleys | • Lifting clamps |
| • Lifting beams | • Pallet forks |
| • Protection harnesses | • Hand operated lifting magnets |
| • Rope pullers | |
-

When the inspection and service is finished, a inspection survey will be printed on the site.

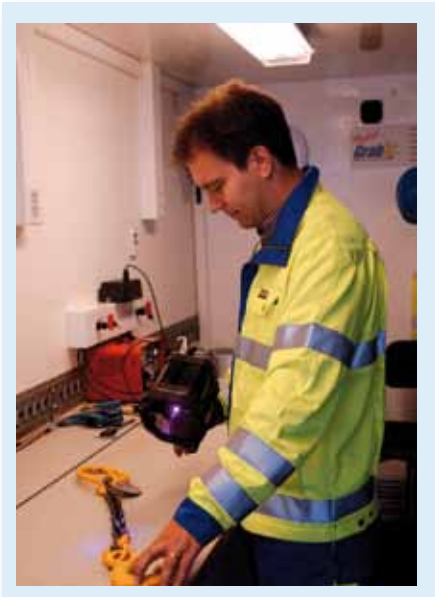

Inspection of steel wire.

Manufacture of new lifting chains. The products are stocked in the truck.

After inspection and service an inspection certificate is issued.

We perform magna flux inspections to detect cracks in the material.

Lever hoists and lifting clamps are proof loaded up to 15 tonnes.

Inspection of roundslings, webbing and webbing slings.

Magna flux inspection of a lifting beam.

GUNNEBO LIFTING TRAINING SYSTEM™

Knowledge Lifts Loads Off Your Mind

We want to ensure that you have safe and correct handling of our products. To do so we have developed a number of customer training programs. The courses are presented by our highly qualified staff in our Training Centre in Sweden.

We offer a range of training sessions that will increase your knowledge of our products and how to handle them safely and correctly. This will create a safer working environment and a longer product life span. After successful completion of the course the participant receives a diploma certifying the knowledge achieved.

Our courses include:

Distributor Training Course

Level 1	1 day	<ul style="list-style-type: none">• Sales and promotion of Gunnebo GrabiQ• Gunnebo Lifting manufacturing process• Internal norms and regulations• Choosing the right sling for the application
Level 2	2 days	<ul style="list-style-type: none">• More detailed Level 1 information• Practical handling and sling assembly

Sling Maker Training Course

- | | |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 day | Focus on practical information and handling: <ul style="list-style-type: none">• Sales, promotion and Gunnebo GrabiQ• Gunnebo Lifting manufacturing process• Internal norms and regulations• To choose the right sling for the application |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Lifting Expert Training Course

Designed to suit customer requirement. Input from DNV, BG, AIB and other external resources.
